Architect

Gensler

General Contractor

Austin Commercial

MAREK partnered with Austin Commercial to build a stadium that matches the caliber of its athletics for Texas A&M University. Our skilled craft-workers completed the drywall and ceilings throughout the facility. Sound Absorbent Wall units were installed throughout the project to help with sound projection and protection.

The state of the art softball stadium is three levels, 125,000 square feet and will accommodate around 2,000 fans. The stadium includes club level seating, two luxury suites, a press box with two radio booths and a press area.

The training rooms allow state of the art equipment that benefit the trainers as they care for the players who need it. Players now have an indoor hitting facility with batting cages in addition to lockers and offices for the staff members.
