Office Building/Headquarters

Services

[Metal Framing & Gypsum Assemblies](#)

[Ceilings & Acoustical Solutions](#)

[Window Treatments](#)

This Confidential Client project began with preconstruction services in June of 2020 and took MAREK crews until December 2021 to complete. MSI/MAREKS's scope of work included metal framing, drywall, insulation, finishing, acoustical ceilings, Direct-applied Exterior Finish Systems, window treatments, and a long list of specialty products. This project required exceptional quality of craftsmanship and material that Marek was able to complete safely and on schedule despite many challenges. The project was a complete buildout of the two new office towers at Atlantic Station, totaling 16 floors plus three levels of parking deck.

In December of 2021, MSI/MAREK crews completed work on a world-renowned confidential client project. Designed by global architecture firm Gensler and led by General Contractor Leapley Construction, the project required the very best of our crews, working 58-hour work weeks for over a year. The sixteen floors, 500,000 square feet of office buildout will house one of the world's largest tech giants.
